

What is Microfiber?

Cross section of a Microfiber

Microfiber is an unsurpassed cleaning material

Our microfiber is made of a revolutionary yarn that consists of microscopic wedge-shaped polyester filaments (70%) and a polyamide (nylon) core (30%). These unique wedge-shaped filaments lift and trap dust particles, grease, waxes and oily residues – meaning you only need to use with water to clean virtually any surface. This eliminates the need for cleaners and detergents. Just dampen the cloth to clean or use dry to dust and polish. The polyamide (nylon) core of the fibers creates a “capillary action” that causes it to absorb quickly and efficiently.

- Cleans without chemicals
- Highly absorbent and durable
- Soft – Won't scratch
- Safe for all surfaces – including clear coat
- Removes smudges, grease and oils with ease
- It even picks up dust and microparticles like a magnet
- Each microfiber cloth, if cared for properly, can be washed approximately 500 times and still retain it's characteristics

Microfiber Use

If using with cleaners, waxes or any other types of chemicals, we recommend following a "color-coding" system for specific jobs to eliminate any chance of cross contamination. Microfibers are safe for all surfaces and will not scratch.

These superior MICROFIBER CLOTHS are for removing smudges, dust, oils and grease from virtually any surface. While normal cloths leave streaks, swirls and lint, these microfiber cloths have special fibers that penetrate and absorb all particles to give a deep-down shine – without scratching.
